Stock-IT

Stock-IT is an add-on module for Dispens-IT allowing dispensers to scan their stock and add notes to alert the dispenser to potential split packs or controlled drug procedure.

As stock is unpacked, scan one item, input the number of packs and the stock is added. As it is dispensed through Dispens-IT, Stock-IT will allow the correct stock to be deducted keeping your stocks at optimum level.

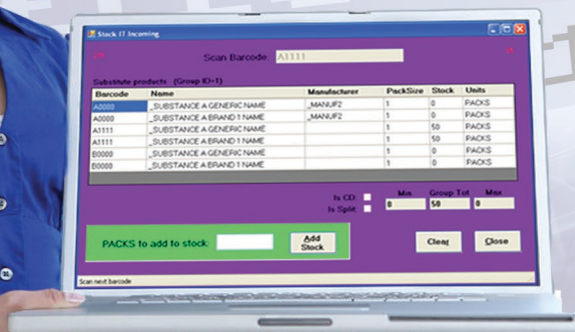

Stock-IT scans it in, Dispens-IT scans it out.
Stock-IT adds a complete stock control system to Dispens-IT.
Be accurate in dispensing and in control of dispensary stock.

Stock-IT

Stock-IT is an option from the Drug Management screen of Dispens-IT as shown here.

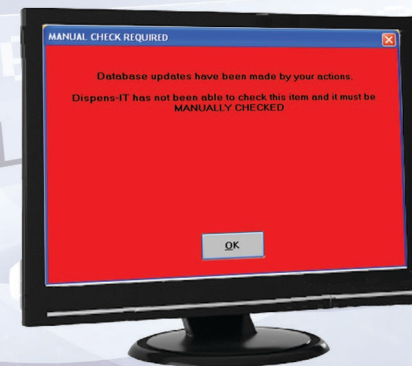

Simply scan the bar code on the item to add to stock. The system will show all equivalent items and ask how many packs of this particular item have been delivered.

Minimum and maximum stock levels can be set and the drug can be identified as a controlled drug or a potential split pack. As the item is dispensed, a warning screen will appear to highlight either possibility so that action may be taken.

Stock-IT can then identify how many of a particular drug or its equivalent are in stock and also how many of a specific manufacturer's drug is in stock.

An additional screen has been added to Dispens-IT to warn of the additional checking needed when information has been added to the database.
